

What is claimed is:

1. An individual wrapping container for wrapping individually an interlabial pad to be held between labia, comprising:

a main body containing said interlabial pad

5 and a cover that covers a part of said main body, the cover forming an unwrapping portion at an end edge portion to be unwrapped to open the individual wrapping container;

wherein said cover is shaped to have a cut off portion at a place where said individual wrapping container is held when the individual wrapping
10 container is opened, and

wherein the individual wrapping container has predetermined region where a finger of a wearer is applied.

2. An individual wrapping container according to claim 1, characterized in that said end edge portion of said cover is inflected or inclined to a bottom side
15 of the individual wrapping container.

3. An individual wrapping container for wrapping individually an interlabial pad to be held between labia, comprising:

a main body containing said interlabial pad and

a cover that covers a part of said main body, the cover forming an
20 unwrapped portion at an end edge portion to be unwrapped to open the individually wrapping container;

wherein a surface of said main body has an instruction to show where said individual wrapping container is held when opening the individual wrapping container is unwrapped.

25 4. An individual wrapping container according to claim 3, characterized in that said instruction is made visual or touchable.

5. An individual wrapping container for wrapping individually an interlabial

pad to be held between labia, comprising:

a main body containing said interlabial pad and

a cover which overlaps on a part of the main body, the cover having an edge portion forming an unwrapping portion to unwrap said individual wrapping container;

wherein the main body has a fine projection at least on an internal surface of said main body.

6. An individual wrapping container according to any one of claims 1 - 5, wherein said individual wrapping container comprises a container on which a series of sheets for wrapping is wound, and

wherein said cover comprises an overlapping portion that is formed by overlapping both ends of a wrapping sheet and a vicinity of said both ends, and

wherein said unwrapping portion comprises one end of said wrapping sheet, and

wherein said individual wrapping container is unwrapped by unfolding said overlapping portion from said unwrapping portion.

7. An individual wrapping container according to claim 6 comprising:

an unwrapping portion for sealing the interlabial pad, and

a bottom line on the opposite side;

wherein the dimension of the main body becomes smaller as it proceeds from said bottom line to said unwrapping portion.

8. An individual wrapping container according to any one of claims 1 - 5,

wherein said individual wrapping container is provided with a re-sealable sealing means on a portion where said cover and said main body are brought into contact.

9. An individual wrapping container according to claim 8, characterized in that said sealing means has a dry edge and that said dry edge projects from the

bottom side of said individual wrapping container.

10. A wrapping body, comprising an interlabial pad to be held between labia and an individual wrapping container for individual wrapping said interlabial pad, wherein the interlabial pad wrapped in said individual wrapping
5 container constitutes the wrapping body, and

wherein the interlabial pad in said individual wrapping container is arranged on a position where at least one part of said interlabial pad is held at the same time when said individual wrapping container is held.

11. An individual wrapping body according to claim 10, wherein said
10 individual wrapping container is the individual wrapping container as recited in any one of claims 1 - 9.

12. A wrapping body according to claim 11,

wherein said interlabial pad and said individual wrapping container have a longitudinal direction and a lateral direction, and substantially form an elongated
15 shape in the longitudinal direction,

wherein a dimension in the longitudinal direction of said individual wrapping container is in a range of 105 -- 130% of a dimension in the longitudinal direction of said interlabial pad.

13. A wrapping body according to claim 10 or 11, wherein the dimension
20 in said lateral direction of said individual wrapping container is set in a range of 105 -- 130% of the dimension in the lateral direction of said interlabial pad.

14. An individual wrapping container for individually wrapping an interlabial pad to be held between labia, comprising:

a main body including said interlabial pad and

25 a cover which overlaps a part of said main body, the cover having an end edge portion forming an unwrapping position to unwrap the individual wrapping container,

wherein said cover and said main body are lightly bonded each other at both end portions in a perpendicular direction to an unwrapping direction of the individual wrapping container, and

5 wherein said cover has an angular shape extending toward both sides of said main body from one part of said unwrapping part as a vertex.

15. An individual wrapping container for individually wrapping an interlabial pad to be held between labia, comprising:

a main body containing said interlabial pad and

10 a cover which overlaps a part of said main body, the cover having an end edge portion forming an unwrapping part for unwrapping said individual wrapping container, and

wherein said cover and said main body are lightly bonded each other at both ends in a perpendicular direction to an unwrapping direction of the individual wrapping container, and

15 wherein an angle is made by a light-bonded line at both ends where the light-bonding is made and a non-bonded edge line where the light-bonding is not made, the angle which is made on a place other than the cover being an acute angle.

20 16. An individual wrapping container according to claim 14, comprising:
an angle formed between a lightly-bonded line at both end portions and
a non-bonded edge line of said cover,

wherein the angle formed on a place other than the cover is an acute angle.
